

Emergence: The Connected Lives of Ants, Brains, Cities and Software

Steven Johnson's *Emergence: The Connected Lives of Ants, Brains, Cities and Software* is a fascinating look at how self-organising systems are changing the world. Why do people cluster together in neighborhoods? How do internet communities spring up from nowhere? Why is a brain conscious even though no single neuron is? What causes a media frenzy? The answer, as Steven Johnson's groundbreaking book shows, is emergence: change that occurs from the bottom up. When enough individual elements interact and organize themselves, the result is collective intelligence - even though no-one is in charge. It is a phenomenon that exists at every level of experience, and will revolutionize the way we see the world. Exhilarating. (J.G. Ballard). A dizzying, dazzling romp through fields as disparate as urban planning, computer-game design, neurology and control theory. (Economist). Mind-expanding ...intelligent, witty and tremendously thought-provoking...Popular science books interesting enough to read twice don't come along all that often. (Guardian). Not just a fascinating quirk of science: it's the future. (The New York Times). Steven Johnson is the author of the acclaimed books *Everything Bad is Good for You*, *Mind Wide Open*, *Where Good Ideas Come From*, *Emergence* and *Interface Culture*. His writing appeared in the *Guardian*, the *New Yorker*, *Nation* and *Harpers*, as well as the op-ed pages of *The New York Times* and the *Wall Street Journal*. He is a Distinguished Writer In Residence at NYU's School Of Journalism, and a Contributing Editor to *Wired*.
